CERTIFICATE OF MAILING

I hereby certify that this correspondence is being deposited with the United States Postal Service by first class mail in an envelope addressed to Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450 by:

Thomas Lizzi

Date: November 29, 2006

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In the application of: Liu et al.

Serial No.: 10/580,932

Filed: May 30, 2006

For: Processes for Sintering Aluminum
and Aluminum Alloys

GROUP ART UNIT: Unknown

Examiner: Unknown

Date: November 29, 2006

Commissioner For Patents
P.O.Box 1450
Alexandria, VA 22313-1450

Dear Sir:

INFORMATION DISCLOSURE STATEMENT

In accordance with the provisions of 37 C.F.R. 1.51, 1.56, 1.97, and 1.98, the art that is identified on the attached form PTO/SB/08B is being disclosed with regard to the above-identified application. Copies of all non-U.S. patents and non-U.S. patent application publications are enclosed herewith in accordance with 37 C.F.R. 1.98. No significance is meant to be given to any markings that may be found on the enclosed copies. The art that is identified is not necessarily analogous art. Applicants hereby request the Examiner to review and make an independent evaluation of the art. Applicants also hereby respectfully request that an initialed copy of the PTO/SB/08B be returned to the undersigned.

Applicant believes from a consultation of the USPTO Private Pair system that this Information Disclosure Statement is being filed within the time period specified in 37 C.F.R.1.97 (b), and therefore believes that no filing fee is required. In the case that Applicant is mistaken in this belief, Applicant requests the opportunity to refile the instant document with the appropriate fee without any loss of right.

Two foreign language patent applications are included among the disclosed art. One is Japan Patent Application No. 06-057363, which was published on March 1, 1994. It is believed that the relevance of this document is that it teaches the sintering aluminum magnesium alloy powder in a nitrogen atmosphere that has a partial pressure of 0.01 atmosphere (1.01 kpa) or less water vapor. The powder, however, has been cold compacted prior to sintering, in contradistinction to the claimed invention of the instant application. A translation of the abstract is provided.

The other foreign language patent application is Japan Patent Application No. 06-033164, which was published on March 1, 1994. It is believed that the relevance of this document is that it teaches the heating of an aluminum powder that contains magnesium in a nitrogen atmosphere in the temperature range of 500 °C to 600 °C. However, the powder is hot compacted. A translation of the abstract is provided as is a machine-language translation of the entire document.

Applicants believe that its invention as described and claimed in the instant application is neither taught nor suggested by the disclosed art. Accordingly, Applicant's invention is believed to be patentable over this art.

Respectfully submitted,

Thomas Lizzi, Esq.
